

HAOS-IIP Paper Spine Index v66.5

Tomislav RupiĆ
Independent Researcher

May 2026

Status. Entry-map artifact; not a new phase, not a new mechanism, and not a physical correspondence claim.

Current Entry Route

Order	Artifact	Layer	Status	Claim boundary
1	66.4 Canonical Entry Paper	Phase 66 translation / hostile audit	recommended public entry	explains the program; no new technical claim
2	66.5 Scale-Bridge Legitimacy Audit	Continuum Physics Scaling Roadmap companion	current milestone	refinement diagnostics only; no continuum proof
3	Phase XIX Spectral Address bundle	terminology / implementation bundle	frozen terminology layer	canonical definition only; no new dynamics
4	18.1 Frozen Pre-Geometry capstone	Phase I capstone	historical core capstone	frozen pre-geometry can organize, but does not bind

Numbered Spine Map

Range	Main role	Representative releases	Boundary
00.1–18.1	original frozen pre-geometry archive	operator architecture through Phase I capstone	bounded discrete morphology and organization only
19.x–33.1	Phase II/III and frozen operator bridge	reinforcement probes, DK branch, Phase X bridge	no broad continuum or physical ontology
34.1–43.1	mesoscopic emergence ladder	proto-particle, protection, interactions, propagation, temporal order, causal closure, distance surrogate	feasibility inside frozen branch-local hierarchy
51.x–52.x	scalar-carrier geometry line	local metric-field and current-closure releases	metric-like and bridge-observable candidates only
53.x	physics bridge observables	physics bridge, gradients, scaling, disorder flux	external-facing proxy diagnostics only
64.1–65.1	materials sidecars	ferromagnetic and magnon bridge papers	bounded external-data recoverability probes
66.1–66.5	public translation and audit layer	canonical entry, hostile audit, scale-bridge audit	claim discipline and roadmap companion artifacts

Current Milestone

Release **66.5** is the current milestone because it records the scale-bridge legitimacy audit, CP1–CP6 roadmap framing, initial convergence diagnostic extract, matched-control separation, and projection-recovery bookkeeping.

Release **66.4** remains the recommended canonical entry paper because it is the cleanest standard-language public introduction.

Non-Claims

This index does not claim a proven continuum limit, derivation of spacetime, derivation of known physics, physical correspondence, uniqueness of a limiting structure, or replacement of established models.

Scale-bridge evidence is useful. Scale-bridge evidence is not continuum proof.
